

Manage Your
Business Critical Output

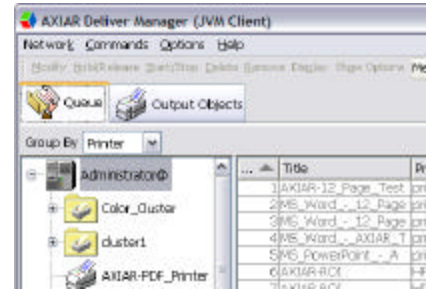

LBM SYSTEMS ANNOUNCES AXIAR 6.30 August 8th, 2007

New Canaan, Connecticut - A new release of LBM Systems' AXIAR output management software is now available that includes several powerful enhancements that improve document formatting, routing and delivery processes for Windows, UNIX, Linux and iSeries (AS/400) applications. With these new features, businesses and organizations have a complete package for intelligent document distribution within their infrastructure and document importing from outside their infrastructure.

AXIAR 6.30 supports Windows Vista™ as well as 32-bit and 64-bit Windows, UNIX and Linux processors. Customers have the option to employ best-of-breed server and operating system technology secure in the knowledge that LBM's software is supported.

LBM Systems development efforts centered on enabling organizations to more effectively create and route documents for increased business efficiency and compliance purposes. Significant advances in document imaging and document data extraction for document management applications are delivered, including:

- PCL to TIFF conversions, useful for automatically delivering output to Document Management and archiving applications
- PCL to text scraping, useful for extracting data values from print jobs and delivering search keywords to document management applications or delivering data values to business applications
- Text to TIFF conversions, useful for formatting and routing text application output to Document Management and archiving applications
- An AXIAR Web service for importing and accessing documents/images through Web applications
- PDF bookmarking adds the ability to automatically create advanced PDF output from UNIX, Linux and Windows application data streams

In addition, AXIAR 6.30 contains advances in output formatting and enterprise control that facilitate the use of AXIAR in a wide variety of application settings. Improvements include:

- AXIAR-generated True Type fonts, which enable the use of printers that require Windows-resident fonts for network form printing
- eFax® enabled Output Object support, which allows AXIAR managed output to be routed to eFax for faster document distribution
- Enhanced support for enterprise servers managing up to 2400 printers with a single server licensed with AXIAR
- Dot matrix form support, which enables AXIAR to intelligently format and route application output to both laser printers and dot matrix printers for remote document delivery

About LBM: LBM Systems develops, delivers and supports leading-edge output management software for commercial application developers and end users of these applications. Through its AXIAR suite, the company delivers solutions for formatting, delivery and retrieval of data from financial/accounting, ERP, desktop and other applications vital to day-to-day business operations.
