

AXIAR

Manage Your
Business Critical Output

Overview

LBM Systems' software significantly accelerated an Oracle Financials implementation by delivering robust output formatting and output management software.

Results

All forms created maintain the layout of the previous proprietary structure

Ensured document delivery

Simplified form creation and modification process

**Return on investment:
Under seven months**

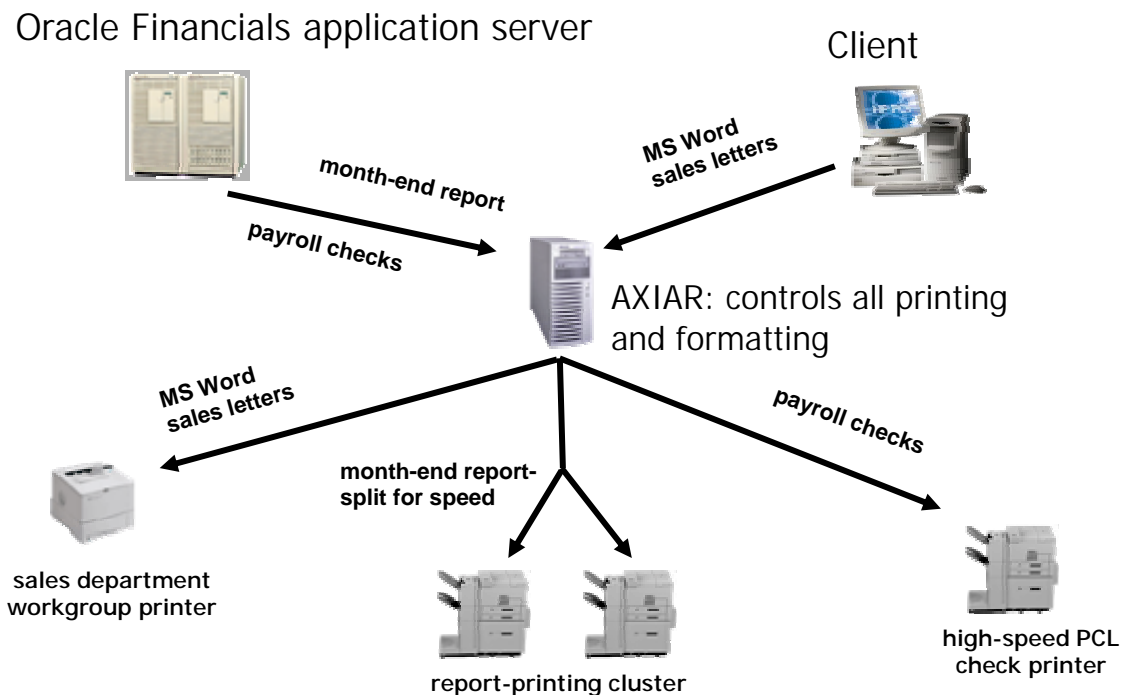

AXIAR Enhances Oracle Financials output and simplifies mainframe to Open Systems migration

Customer need: mainframe-caliber print queue management and laser form capabilities on open systems during and after migration from proprietary mainframe financial application plus Xerox printing system to Oracle financials plus PCL printing system

Why: maintain print queue management capabilities in open systems and reduce printing costs using inexpensive HP LaserJet printers

Application: Oracle Financials

Solution: LBM software manages all printing output, easing the transition from mainframe printing to open systems printing. Laser forms (including payroll checks and utility bills) print using AXIAR Format and HP LaserJet printers. LBM printing consulting services extensively used during the migration period.
